## INTRODUCTION

The Practice Management Framework (PMF) was developed to provide architects with a firm foundation to manage their business and provide good architectural service to clients.

The PMF is intended to be relevant for Singapore architectural practices, regardless of size or discipline, and takes into consideration good working methods and procedures from other relevant industries and international management frameworks.

As such, the Practice Management Framework is structured into 2 sections:

- ▶ **Practice Management** – This covers the knowledge required for the successful management of an architectural practice.
- ▶ **Project Delivery** – This covers the typical lifecycle of an architectural project.
